SUBJECT: Verification Study, Dec. 1986, Naval Training Center,
Orlando, Orange County

I've reviewed the subject document and offer these comments for your consideration. Generally, I concur with the conclusions and recommendations presented in this study. The recommendation for quarterly monitoring for a year is appropriate for the sites at which low level contamination was found. If, however, the contamination remains at the current levels or increases during the year, consideration must be given to additional assessment and corrective actions, if warranted.

SUBJECT: Verification Study, Dec. 1986, Naval Air Station,
Whiting Field, Santa Rosa County

I've reviewed the subject document and have found it to be technically sound, detailed and comprehensive in scope. I concur with the recommendations noted for each site. I concur with the conclusions that 15 of the 16 sites should be moved into the Characterization Phase and with the recommendation for additional wells and sampling at the sites noted.
